

# Voice & Automation

Discover how Voiteq's portfolio of intelligent voice solutions work alongside automation.

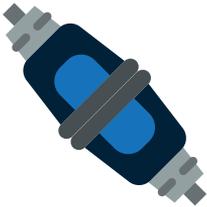

# Voice & Automation

## Non-Integrated Voice

Voice can be used to complement an automated system without integration. Our customers have effectively used voice to pick products that feed sortation systems, pick products alongside conveyor systems, and to remove products from sortation chutes - all without integration or changing the existing automation workflow.

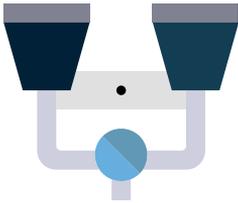

## Integrated Voice

No matter what your operational requirements are, Voiteq's voice integration methods are flexible enough to work with any automation system. Our customers have effectively used voice to update their automation control systems with real-time information, such as stock movements, stock outages and to ensure totes can be re-routed to alternative locations.

## Voice Guided Process

By voice guiding an operator to complete a task accurately, any goods supplied to an automation system will be correct and in the right location at the right time. Ensuring your automation system is always functioning as effectively as possible.

## Sortation

Our voice solutions can gather and prepare products ready for your sortation system, ensuring accuracy and conformity, reducing the number of errors your sorter might encounter and speeding up your entire operation.

## Conveyors

Our voice systems can solve major challenges associated with automated conveyor systems, such as being restricted to only being able to pick one order into one tote. With our system we can enable multi-order picking into the same tote, increasing conveyor capacity, throughput and productivity.

## Interleaving

Process interleaving is simple to achieve when using our voice system. Operatives can switch seamlessly between functions such as picking and replenishment at the appropriate time. For example, when a tote arrives on a conveyor containing products to be put away into a pick location the operator can carry out the replenishment and then return to the pick function when complete.

Headquartered in the UK and with offices throughout Europe and North America, Voiteq is part of international technology group Körber.

With over 18 years' experience of voice-directed solutions, Voiteq offers logistics expertise helping operations improve business operations, enhance user experience and support industry growth.
